

Edger Sander

Floor edgers are designed to cover the last 2 ½” around the perimeter of the room where the large floor sander can’t get. This is an upright 7” disc sander on wheels with a vacuum attachment. The sander rides on two wheels and has a protective molded cup around the disc to help guide it along the edge of the wall. The powerful motor makes quick work of sanding this hard to get area while the fan driven vacuum will send the vast majority of the sanding dust into the attached dust bag. We do recommend an inexpensive dust mask for the finer airborne dust that will still be present.

Because the sander rides on two wheels, the disc cuts at the front and not the backside. This works well for sanding along walls, but is not recommended for the main areas of smaller places, such as front halls or pantries. They tend to leave a washboard effect and are only suitable for the edges of rooms.

While sandpaper costs aren’t included in the rental rate, our policy is to give you more than enough paper when you pick up the sander: when you return the sander, we will only charge you for what you use. This way you don’t have to worry about running out of paper in the middle of your project.
