

Orbital Floor Sander

Orbital sanders use an orbital action to move paper. The paper moves around in random orbits so it does not return to the same spot each orbit, which results in scratch free sanding. This makes orbital floor sanders a safe bet for sanding any surface without damage. This sander is ideal for parquet flooring, or narrow halls, pantries, or entryways where cross grain sanding is required. Unlike a drum sander, this unit does not require the additional rental of a floor edger because it can float right up to the edge of a wall, and because it floats easily, it can be used by any size person.

Unfortunately, this “safe” approach to sanding is also the least aggressive. It will take a great deal more time to sand an entire room with this unit compared to a drum sander. For this reason, drum sanders are more popular than orbital sanders. However, there are applications that drum sanders just aren’t suited for, and that’s when the orbital floor sanders work great.

While sandpaper costs aren’t included in the rental rate, our policy is to give you more than enough paper when you pick up the sander: when you return the sander, we will only charge you for what you use. This way you don’t have to worry about running out of paper in the middle of your project.
